

Per-step discretization

e.g., OpenVLA, RT-2

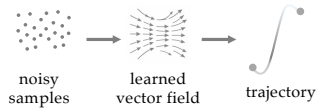

Sequence tokenization

e.g., FAST (DCT-based)

Continuous generative

e.g., $\pi_{0.5}$ (flow matching)

Hermite Prior

geometric trajectory prior (Ours)

Encoding

$T \times D$ tokens

DCT $\rightarrow$ quant. $\rightarrow$ BPE

Continuous values via flow matching / diffusion

Piecewise Hermite segments, Boundary states (p, v)

Feature

Long sequence, weak temporal continuity

Generic basis, w/o geometric prior

Iterative ODE, w/o trajectory prior

Assumes piecewise-smooth actions
